

UNSEEN BUT ALWAYS READY FOR USE.

GIFAS underfloor distributors harmoniously integrate supply technology for electricity, water, sewage, compressed air and media. They are space-saving and ready-to-use on request in your vicinity - they are quick to start and highly resilient without being seen.

Thanks to underfloor distributors from GIFAS ELECTRIC, electrical power is quickly available anywhere and without time-consuming installation work! Power, media and water distributors integrated invisibly into the cityscape, designed with long service and ease of maintenance in mind.

Over the following pages, you will see a synopsis of the advantages of our high-quality components and materials, and how we can help you, step by step, towards a future-proof underfloor distributor system that meets your individual preferences and requirements. We also pay close attention to reliability and product quality. "Made in Germany".

To offer you the right product for every application, GIFAS has a number of different underfloor distributor systems of varying function, size and application in its portfolio. One characteristic shared by all of the products is the uniqueness and knowledge of how to offer our customers tailored, VDE-compliant products that are virtually impossible to vandalise, remain fully capable of being walked or driven on during operation and which integrate seamlessly into the landscape.

Properties

Body and cover

The body of the underfloor distributor is made from stainless steel up to 6 mm thick, which is impervious to seismic movement, moisture, rodents and other environmental influences. The cover is also made from 6 mm stainless steel and can be designed to withstand the F900 weight class.

Solid rubber

All solid rubber distributors from GIFAS ELECTRIC are made from 100% vulcanised, self-extinguishing butyl rubber (Shore hardness 97), compliant with VDE 0471 Part 2.2. They are resistant to oils, various acids and alkalis, and are impervious to weld and spark showers. The solid rubber distributors we use mean that condensation build-up in the distributor caused by temperature fluctuations can be reliably ruled out.

C-SAFE

The cable outlet guard is designed so that its flat and rounded construction presents no obstacle, trip hazard or sharp edges. The underfloor distributor system can be walked on or driven over without limit during operation, with supply lines being fully protected.

Gas springs

Gas springs assist with the opening and closing of the underfloor distributor system. They are not susceptible to faults, similar to those that are installed in the boot of your car.

Load classes

GIFAS underfloor distributor systems offer you the following types according to the DIN 124 load classes: A15 (pedestrian walkways and cycle lanes), B125 (truck and parking spaces), D400 (heavy goods vehicles) and F900 (airports and production halls with forklift truck traffic).

RFID billing (optional)

Depending on the application, the GIFAS underfloor distributors can be equipped with billing systems. For example, RFID credit cards can be used to activate the freely available slots on the distributor.

Diving bell (optional)

In areas prone to flooding, underfloor distributors can be equipped with a diving bell. The principle is similar to an inverted glass in a bowl filled with water. A bell of air forms around the solid rubber distributor, protecting the components from moisture.

Model overview

PIAZZA

Product features

- Can be locked, walked on or driven over during operation
- Cover can be filled with surrounding material or designed as a floor plate
- Secured against unauthorised opening (vandal-proof!)
- Gas springs for force-free, assisted opening
- Frost-proof operation thanks to cover heating
- Maintenance-free GIFAS solid rubber distributor system guarantees optimum operating safety down to -40°C
- No formation of condensation thanks to the GIFAS solid rubber distributor
- Resistant to environmental influences
- Stainless steel construction, all metal parts made from V2A
- Visible reflectors on the opened cover system
- Distributor fastening on the underside of the cover
- The connector distributor can be accessed when installed (E-check - DGUV A3)
- Pit covers, locks and distributors can be replaced
- Optional: on request with diving bell

Underfloor distributor for electric mobility

RETRANT with spiral charging cable and external wall box

Solid stainless steel construction (V2A/1.4301) 380x280mm, gas pressure spring for fully automatic opening, manhole cover made of non-slip stainless steel tear sheet, car charging station.

Technical additions (to table, page 68)

Cover:	Sturdy stainless steel (V2A/1.4301) bulb plate.
Cable outlet:	Integrated in the side of the lid.
Locking:	The manhole cover is locked by a double-bit lock with snap lock.

Product features

- Vandal-proof stainless steel construction
- Protected charging of electric vehicles
- Practical charging points, e.g. for car parks in neighbourhoods
- Future-proof solution for building planning
- Control of the charging point via external wall box on the building

Supplied package
Stainless steel construction with
- Manhole cover made of bulb plate (V2A/1.4301)
- Spiral charging cable 3m with type 2 coupling
completely assembled and wired ready for connection

CAMPETTO 6 with socket type 2 and integrated wall box

Solid stainless steel construction (V2A/1.4301) 800x552mm, gas pressure springs for fully automatic opening, manhole cover can be filled individually, car charging station.

Technical additions (to table, page 68)

Cover filling:	The pit with a depth of 70mm can be custom-filled to blend in with its surroundings.
Cable exit flap:	(135x90mm) integrated into the shaft cover frame
Locking:	The manhole cover is locked by a self-cleaning lock with a snap lock.

Supplied package
Stainless steel construction with
- fillable shaft cover
- Charging station with socket type 2
completely assembled and wired ready for connection

PIAZZA 800 (D400)

Solid stainless steel construction (V2A/1.4301) 750x750 mm, gas springs for fully automatic opening, shaft cover can be custom-filled, distributor as per the client's request.

Technical additions

Cover filling:	The pit with a depth of 70mm can be custom-filled to blend in with its surroundings.
Cable exit flap:	(210x130mm) integrated into the shaft cover frame.
Locking:	A sturdy closing mechanism (with snap lock) closes the shaft cover and it can also be secured with a shackle lock. Cable exit flap secured with a double bit lock (locking tool included in scope of delivery).
Heating:	To prevent the Floor Pit from being frozen in the closed position, a thermostatically controlled heating tape is built into the lid of the Floor Pit housing.
Diving bell (optional):	Protection against the risk of flooding.

It is the client's responsibility to ensure the standards-appropriate substructure, correct installation of the shaft and corresponding drainage. The shaft cover is not sealed against surface water.

Supplied package

Stainless steel construction with

- fillable shaft cover
- solid rubber electrical distributor
- junction box

Fully assembled and wired.
Mounted on concrete ring (H=500mm, NW=800mm)
"DN-Concrete pipe by DIN 4034-2"

PIAZZA 1000 (D400)

Solid stainless steel construction (V2A/1.4301) 1000x1000mm, gas springs for fully automatic opening, shaft cover can be custom-filled, distributor as per the client's request.

Technical additions

Cover filling:	The pit with a depth of 70mm can be custom-filled to blend in with its surroundings.
Cable exit flap:	(210x130mm) integrated into the shaft cover frame.
Locking:	A sturdy closing mechanism (with snap lock) closes the shaft cover and it can also be secured with a shackle lock. Cable exit flap secured with a double bit lock (locking tool included in scope of delivery).
Heating:	To prevent the Floor Pit from being frozen in the closed position, a thermostatically controlled heating tape is built into the lid of the Floor Pit housing.
Diving bell (optional):	Protection against the risk of flooding.

It is the client's responsibility to ensure the standards-appropriate substructure, correct installation of the shaft and corresponding drainage. The shaft cover is not sealed against surface water.

!
Diving bell
Available upon customer request.

Supplied package

- Stainless steel construction with
- fillable shaft cover
- solid rubber electrical distributor
- junction box

Fully assembled and wired.

Mounted on concrete ring (H=500mm, NW=1000mm)
"DN-Concrete pipe by DIN 4034-2"

PIAZZA 2000 (F900)

The GIFAS underfloor distributor PIAZZA 2000 has been specially designed for use at maintenance bases and in hangars.

Thanks to its strongly reinforced shaft cover, the PIAZZA 2000 can withstand the weight of an aircraft wheel, industrial lorry, tractor or pushback.

The main distributors are made of extremely sturdy solid rubber in Germany. They are extremely long-lasting.

For your application, we can equip the main distributors according to your requirements with any type of connector, jet connectors and fuse installations or controls. Load break switches or back-up fuses can be installed in the connection distributor.

Mounted on an underground substructure, the cover can be used as access and also as a carrier for power distribution.

Product features

- Can be locked, walked on or driven over during operation
- Cover can be filled with surrounding material or designed as a floor plate
- Secured against unauthorised opening (vandal-proof!)
- Gas springs for force-free, assisted opening
- Frost-proof operation thanks to cover heating
- Maintenance-free GIFAS solid rubber distributor system guarantees optimum operating safety down to -40°C
- No formation of condensation thanks to the GIFAS solid rubber distributor
- Resistant to environmental influences
- Stainless steel construction, all metal parts made from V2A
- Visible reflectors on the opened cover system
- Distributor fastening on the underside of the cover
- The connector distributor can be accessed when installed (E-check - DGUVA3)
- Pit covers, locks and distributors can be replaced

CAMPETTO V (A15)

Solid stainless steel construction (V2A/1.4301) in two sizes, gas springs for fully automatic opening, shaft cover made from non-slip steel floor plate, distributor as per the client's request.

Technical additions

Cover:	V2A/1.4301 non-slip steel floor plate
Cable exit flap:	(135x90mm) in the centre on the head side of the cover
Locking:	A self-cleaning lock with snap fastener closes the shaft cover (locking tool included in the scope of delivery).
Heating (optional):	To prevent the Floor Pit from being frozen in the closed position, a thermostatically controlled heating tape is built into the lid of the Floor Pit housing.
Diving bell (optional):	Protection against the risk of flooding.

It is the client's responsibility to ensure the standards-appropriate substructure, correct installation of the shaft and corresponding drainage. The shaft cover is not sealed against surface water.

Supplied package

- stainless steel construction with
 - cover made from V2A non-slip steel floor plate
 - solid rubber electrical distributor (Protection class II)
 - junction box (Protection class II)
- Fully assembled and wired.

CAMPETTO VI (B125)

Solid stainless steel construction (V2A/1.4301) in two sizes, gas springs for fully automatic opening, shaft cover can be custom-filled, distributor as per the client's request.

Technical additions

Cover filling:	The pit with a depth of 70mm can be custom-filled to blend in with its surroundings.
Cable exit flap:	(135x90mm) in the centre on the head side of the cover
Locking:	A self-cleaning lock with snap fastener closes the shaft cover (locking tool included in the scope of delivery).
Heating (optional):	To prevent the Floor Pit from being frozen in the closed position, a thermostatically controlled heating tape is built into the lid of the Floor Pit housing.
Diving bell (optional):	Protection against the risk of flooding.

It is the client's responsibility to ensure the standards-appropriate substructure, correct installation of the shaft and corresponding drainage. The shaft cover is not sealed against surface water.

Supplied package

- Stainless steel construction with
- fillable shaft cover
- solid rubber electrical distributor (Protection class II)
- junction box (Protection class II)
- Fully assembled and wired.

Cover

A covered version made of V2A non-slip steel floor plate is also available.

for distributors
7200 – 7400

for distributors
7700 – 7900

CAMPETTO VII (A15)

Solid stainless steel construction (V2A/1.4301), gas springs for fully automatic opening, shaft cover made from non-slip steel floor plate, distributor as per the client's request.

Technical additions

Cover:	V2A/1.4301 non-slip steel floor plate.
Cable exit flap:	(280x110mm) in the centre on the head side of the cover
Locking:	A self-cleaning lock with snap fastener closes the shaft cover (locking tool included in the scope of delivery).
Heating (optional):	To prevent the Floor Pit from being frozen in the closed position, a thermostatically controlled heating tape is built into the lid of the Floor Pit housing.
Diving bell (optional):	Protection against the risk of flooding.

It is the client's responsibility to ensure the standards-appropriate substructure, correct installation of the shaft and corresponding drainage. The shaft cover is not sealed against surface water.

Supplied package

- Stainless steel construction with
 - cover made from V2A non-slip steel floor plate
 - solid rubber electrical distributor (Protection class II)
 - junction box (Protection class II)
- Fully assembled and wired.

for distributor 7200 - 7900

CAMPETTO VIII (B125)

Solid stainless steel construction (V2A/1.4301), gas springs for fully automatic opening, shaft cover can be custom-filled, distributor as per the client's request.

Technical additions

Cover filling:	The pit with a depth of 70mm can be custom-filled to blend in with its surroundings.
Cable exit flap:	(280x110mm) in the centre on the head side of the cover
Locking:	A self-cleaning lock with snap fastener closes the shaft cover (locking tool included in the scope of delivery).
Heating (optional):	To prevent the Floor Pit from being frozen in the closed position, a thermostatically controlled heating tape is built into the lid of the Floor Pit housing.
Diving bell (optional):	Protection against the risk of flooding.

It is the client's responsibility to ensure the standards-appropriate substructure, correct installation of the shaft and corresponding drainage. The shaft cover is not sealed against surface water.

Supplied package

- Stainless steel construction with
 - fillable shaft cover
 - solid rubber electrical distributor (Protection class II)
 - junction box (Protection class II)
- Fully assembled and wired.

RETRANT (A15)

Product features

- Lockable/ walkable during operation
- Solid stainless steel construction, rust-free
- Completely maintenance-free (E-Check - DGUV A3)
- Cover made from non-slip steel floor plate
- No formation of condensation due to GIFAS solid rubber distributor (protection class II)
- Easy operation
- Ground-flush installation
- Excellent safety thanks to the GIFAS double pressure method; the cover is held securely closed even without a lock
- Locking is performed using a countersunk, cover-flush dual bit lock (1 key included in the scope of delivery)
- Cable exit for cables is located in the shaft cover

It is the client's responsibility to ensure the standards-appropriate substructure, correct installation of the shaft and corresponding drainage. The shaft cover is not sealed against surface water.

PICCOLINO 200 (C250)

Product features

- Solid stainless steel construction, rust-free
- Completely maintenance-free (E-check)
- Cover made from non-slip steel floor plate
- Easy operation
- Can be walked on or driven over during operation
- Ground-flush installation
- Excellent operating safety thanks to reclosing after commissioning
- Locking is performed using a countersunk, cover-flush dual bit lock (1 key included in the scope of delivery)
- Cable exit opening in the cover lid for cables up to $d=25\text{mm}$

It is the client's responsibility to ensure the standards-appropriate substructure, correct installation of the shaft and corresponding drainage. The shaft cover is not sealed against surface water.

PICCOLINO 120 (A15)

Product features

- Solid stainless steel construction, rust-free
- Completely maintenance-free (E-check)
- Cover made from non-slip steel floor plate
- Easy operation
- Can be walked on or driven over during operation
- Ground-flush installation
- Excellent operating safety thanks to reclosing after commissioning
- Locking is performed using a countersunk, cover-flush dual bit lock (1 key included in the scope of delivery)
- Cable exit opening in the cover lid for cables up to $d=15\text{mm}$

It is the client's responsibility to ensure the standards-appropriate substructure, correct installation of the shaft and corresponding drainage. The shaft cover is not sealed against surface water.

GIFAS live experience!

How it works

Download the GIFAS Augmented Reality App free for your smartphone or tablet. Then scan the picture that you can see below - the so-called marker - with the GIFAS app. You are now able to look at the product that you have selected from various angles and all sides. Enjoy your 3D tour!

Instructions

The GIFAS app has been developed for use on modern tablets and smartphones using both Apple iOS and Android operating systems. Older devices and software may experience some limitations in their functionality. Due to the larger display size, the app's features are generally at their best on a tablet.

Tip

If you need to place your tablet or smartphone very close to the marker for it to be detected, this may be because there isn't enough light. How it's done: First, point the camera at the marker at close range. Once the app has captured the marker and constructed the 3D model, you can slowly move the device away from the marker - up to a distance of 3 metres. Keep the phone or tablet as still as possible.
